WinCallem — Welcome & Vision

Welcome to WinCallem

Vision: a website/app where anyone can build their own sports betting models without code. Users will see real odds (with affiliate 'Bet' buttons), configure simple models, run them in the background, see results, set alerts, and export data.

6-Week MVP Goal

Week 1: Setup + docs + small contributions.
Week 2: Auth (Auth.js) + Stripe subscriptions.
Week 3: Odds ingestion → DuckDB/Parquet; basic odds table.
Week 4: Model Builder v0 (choose features → run Celery job → show metrics).
Week 5: Alerts (edge > X%) + exports (CSV/Parquet).
Week 6: Testing + polish + MVP demo.

Loop we're building

Log in → See Odds → Build Model → Run → See Results → Get Alerts → Export → (Optional) Bet via affiliate link.

How we'll work together

Tim (Project Lead): architecture, core features, roadmap.
Adrian & Aaron (Collaborators): setup, documentation, small UI/UX or data tasks, testing.
We meet weekly (next: Sunday) to review progress and set next week's goals.
